See the Estate Hot Storm IN ACTION!

At Our Store on
October 27th and 28th

THE WONDERFUL new system of hot air heating that brings the comfort and convenience of a furnace-heated home within everyone's reach will be demonstrated and thoroughly explained by an expert from the Estate Stove Company.

Estate Hot Storm

—the Stove with a "Little Furnace" in it

is not a stove, not a furnace, but a heating system that combines the best features of both. It sets in the room like a stove, its exterior looks like a stove, but the similarity ends. For its interior is utterly different from any stove you have seen—inside is built like a hot air furnace.

Don't fail to take advantage of this opportunity to see this wonderful heater demonstrated by an expert.

Every Woman Should Know

There are three entirely different kinds of baking powder, namely:

- (1) Cream of tartar, derived from grapes;
- (2) Alum, a mineral acid; and
- (3) Phosphate of Lime.

(1) Baking Powders made of Cream of Tartar add to the food the same healthful qualities that exist in the ripe grapes from which Cream of Tartar is derived.

(2) Baking Powders made of Alum add to the food some form of Alum or Aluminum, a heavy metal, wholly foreign to any natural article of food.

(3) Phosphate of Lime is made from rock or by burning bones which by chemical action are changed into a white, powdered acid. It is used in baking powder only because it is a cheaper substitute.

A Cream of Tartar powder never contains Alum or Phosphate.

Every housekeeper should read the names of the ingredients printed on the label and know what she is using.
